DETAILED ACTION

Information Disclosure Statement

1. The Information Disclosure Statement submitted on 3/5/2007 has been considered in this action by the examiner. The IDS was submitted after the examiner had submitted the first action to be mailed; therefore, it was not considered in the first action.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1, 3, and 5 are rejected under 35 U.S.C. 102(b) as being anticipated by Jurik et al. (US 6,371,519). Jurik et al. discloses having a telescopic steering column for a vehicle (see Figure 1), where: the steering column is telescopically adjustable with respect to a vehicle body side member (see Figure 2) and movable toward a front of the vehicle in response to a secondary collision; an outer peripheral surface of the steering column is fitted with a metallic ring (56) functioning to relate a telescopic adjustment of the steering column, and which engages the body side member to absorb impact energy while frictionally sliding (see col. 3, lines 50-55) on the steering column toward the front of the vehicle when the collision occurs.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 2 and 4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Jurik et al. in view of Camp et al. (US 2005/0029795). Jurik et al. is discussed above and fails to disclose the metallic ring having a damper to prevent butting noises. However, Camp et al. discloses having small rubber "soft stops" to prevent impact noise when the extremes of the adjustment are reached. It would be obvious to one having ordinary skill in the art at the time of the invention to put rubber on the metallic ring in view of Camp et al. teaching that it is to prevent impact noises in a steering column assembly.

Response to Arguments

6. Applicant's arguments with respect to claims 1-5 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The following is also a telescopic steering column with a frictional ring stop: Jurik et al. (US 5,609,423).
